LETTER OF SUBMITTAL

THE COMMONWEALTH OF MASSACHUSETTS,
OFFICE OF THE SECRETARY,
DIVISION OF VITAL STATISTICS, BOSTON, April 1, 1938.

To the Honorable Senate and House of Representatives:

I have the honor to submit herewith, as required by Chapter 46, section 21, and Chapter 208, section 47, of the General Laws, the ninety-sixth annual report on statistics of births, marriages, divorces, and deaths in Massachusetts, for the calendar year 1937 in two parts: Part I, Mortality Statistics; Part II, Statistics of Births, Marriages, and Divorces. The fact that deaths are reported monthly while births, marriages, and statistics of divorce are not required to be reported until March, April and May of the year following that in which the events occur, makes possible the availability of the mortality report earlier than the report of births, marriages, and divorces. Hence the presentation in two parts in one volume.

The editorial review and the method of presentation of the statistical data were prepared by Arthur J. Hassett, State Registrar, in charge of the Division of Vital Statistics. The statistical tables were prepared under the direction of Elizabeth M. Canty, statistician of the division. The exhibition of tabular results is restricted to such as are plainly of practical utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

FREDERIC W. COOK,
Secretary of the Commonwealth.

Editorial Review of the Vital Statistics of Massachusetts, 1937

INTRODUCTION

History.

Death Registration. — Massachusetts, the first colony to recognize the importance of the registration of vital statistics required as early as 1639 the registration of births, marriages and deaths; in 1840 statutes required that copies should be filed with the Secretary of the Commonwealth. In 1880 the registration area for deaths recognized by the United States Bureau of the Census, i.e., the States, and cities in other States, effectively enforcing satisfactory registration laws of all deaths registered, included but two States, Massachusetts and New Jersey, the District of Columbia, and a number of cities in non-registration States.

During the period 1841 to 1937, inclusive, 3,702,723 deaths have been reported, and tabulated in the Division of Vital Statistics.

The original records are on file in the cities and towns in which they occurred, and in the city and town given as the residence of the deceased at the time of death, and copies are also on file at the State House.

Purpose. — Death registration often gives the first intimation of pestilential disease, permitting health officers to attack epidemics in their incipency. It serves as evidence in the inheritance of property and in the settlement of life insurance. It is useful in preventing crime through the restriction placed upon the disposal of dead human bodies, and insures a permanent and uniform record of the death of each individual for all purposes.

Mortality Statistics. — Mortality statistics, or statistics of deaths, are useful in showing the extent and rate of change in population produced by deaths, the average duration of life, the relative frequency with which the several causes produce death, and for their service in creating an interest in public health administration and securing support for sanitary measures. In comparison with birth statistics they give useful information regarding population increase or decrease. Mortality statistics, however, cannot be used as an index of the prevalence of certain diseases, because there is no fixed ratio between sickness and fatality. Only cases of fatal sickness or disease are given, while morbidity statistics include all cases, whether fatal or not.

Source of Data. — Mortality statistics are based upon original data obtained by the registration of deaths, which is accomplished by the filing of a blank or schedule known as the standard death certificate.

The responsibility for seeing that a certificate is properly made out and filed with the local board of health rests primarily with the undertaker, who is required by law to present a satisfactory certificate of death before he may obtain a permit to remove the body from the city or town in which the death occurred, or to bury the body. The local board of health is required to transmit the death certificate to the city or town clerk, who in turn records the death and is required to transmit a certified copy to the Secretary of the Commonwealth on or before the tenth day of the month following that in which the death occurred. Hospitals and other institutions are required to obtain, when a person is received, the facts which would be required for record in the event of the death of such person.

Occupations. — Much interest is being shown in the study of occupations in connection with cause of death. Many industries have adapted newer types of machines that give employment to large numbers and may have increased occupational risks. Table 18 has been prepared from the list of occupations published by the Bureau of the Census showing the number of those gainfully employed who died from important causes. This table should be of value in showing the hazards of certain industries as it deals with the direct cause of death as well as the occupation of the deceased.

Death Rates and Their Comparability. — The death rates given in this report are based upon the comparison of total deaths with the aggregate population. They are usually expressed in terms of the number of deaths per 1,000 population, and are calculated by dividing the total number of deaths by the population in thousands. This means that death rates vary with the character of the population and each element has its relation to the rate of mortality, and therefore, for comparison with other States or countries, the make-up of the population must be considered. The death rate per 1,000 males is generally higher than the rate per 1,000 females. Hence, a State having a relatively larger female population than another will normally show a lower death rate, and a community where the very young or old predominate will show a higher rate than a community made up largely of young adults. Rates will also vary with the color and nationality of the inhabitants.

Factors which seriously affect the comparability of the death rates of different communities are: (1) race composition; (2) the social, marital, and economic status of the people; (3) employment; (4) migration; and (5) the birth rate.

Allocation. — Deaths are charged to the place of the event and also are allocated to the place of residence of the deceased. This insures as near a true rate as possible and has a marked effect on municipalities which are large hospital centers. These cities and towns in the past have been charged with a high rate and small communities without hospital facilities have shown a low rate. The usual place of residence has been used as a basis for all deaths occurring outside the State as well as for those in the State. In the case of institutions and jails deaths have been allocated to the place of residence before entrance. Such persons are regarded as temporary residents of these places since they did not voluntarily enter with the intention of remaining and without doubt would have returned, if discharged, to their usual residence. Accidental deaths have been treated in the same manner as those caused by sickness. While these deaths are often charged to municipalities in which they

do not occur, it is probable that at some future time a plan will be devised whereby these deaths besides being allocated to the place of residence, will also be charged to the place where the accident actually happened. The foregoing outline does not by any means cover all cases that may and will arise but will serve as an explanation of the method used in preparing the allocated tables.

Number of Deaths and Death Rates. — There was an increase in the mortality of 1937 as compared with that of 1936, the number of deaths occurring in the State during the calendar year 1937 being 52,287, an increase as compared with 1936, of 233. Based on the estimated population of 1937 of 4,404,220, these deaths correspond to a rate of 11.9 per 1,000 population, being the same in 1936. Deaths of residents of Massachusetts numbered 51,739 in 1937, resulting in a death rate of 11.7 per 1,000 inhabitants.

During the ten-year periods, from 1918 to 1927, inclusive, the average death rate of the Commonwealth was 13.6, and 1928 to 1937, inclusive, 11.8.

This remarkable decrease in mortality has been the rule rather than the exception in the experiences of the other States. Since 1912 the average death rate for Massachusetts has been 13.1 per 1,000 living.

Sex. — Of the 52,287 deaths in 1937, 27,395, or 52.4 per cent, were males, the percentage in 1936 being 52.1. The proportion of males in the living population, as shown by the United States Census of 1930, was 48.7 per cent. Expressed as a ratio there were 1,101 deaths of males per 1,000 deaths of females in 1937, as compared with 1,086 in 1936, 1,071 in 1935, and 1,098 in 1934. Of the 51,739 residents of the State who died in 1937, 27,088, or 52.4 per cent, were males.

Table 5, on page 30, shows that the death rate for males has been consistently greater than the death rate for females. The death rate of the sexes has fluctuated considerably, reaching the maximum in 1918, when the difference was 3 per 1,000.

Age. — Of the 51,739 deaths in 1937 of residents of the State, 2,684, or 5.2 per cent were of infants under 1 year of age. The rates for infant deaths in previous years, which included non-residents, were 5.5 per cent in 1936, and an average of 6.3 for the five years from 1932 to 1936, 9.3 for the five years from 1927 to 1931 and 12.3 for the five years from 1922 to 1926. A more detailed discussion of infant mortality may be found on pages 4 and 5.

Sex and Age. — The death rate of adult males might be expected to exceed the rate of adult females, on account of the more dangerous occupations of the males, but the excess in the death rate of male infants as compared with female infants has never been satisfactorily explained. Of the 2,684 decedents under 1 year of age in 1937, 1,515 or 56.4 per cent, were males. The ratio of male to female deaths among the higher age periods fluctuated somewhat. The proportion of male deaths was the larger from 1 year of age up to and including the age period 70 to 74 years, with the exceptions of the 2 year and 25 to 29 year age periods. From the age of 75 years and upward the number of deaths of females exceeded the deaths of males, including the reputed centenarians, numbering 27, of whom 8 were males and 19 were females. The ratios of male deaths per 1,000 deaths of females at the various age periods in the four years 1934-1937 are shown in Table 8, on page 31.

The excess of females in the population 65 years of age and over is so great that even though their mortality at each age period is below that of males, the absolute number of deaths is greater. Among the 27,088 male decedents in 1937, 1,515 or 5.6 per cent, were under 1 year of age; among the 24,651 female decedents, 1,169 or 4.7 per cent, were under 1 year; and among the decedents of both sexes 5.2 per cent were under 1 year (see Table 9, page 32).

Marital Condition. — Not quite one half (47 per cent) of the decedents 15 years of age and over, whose marital condition was reported in 1937 were married, 18.6 per cent were single, 32.8 per cent were widowed, 1.4 per cent were divorced, and .2 per cent were unknown. Among the male decedents 55.7 per cent were married, 18.9 per cent were single, 23.4 per cent were widowed, 1.7 per cent were divorced, and .3 per cent were unknown. Among the female decedents 37.5 per cent were married, 18.2 per cent were single, 43 per cent were widowed, 1.2 per

cent were divorced, and .1 per cent were unknown. No precise study of the bearing of marital condition on mortality statistics can be made, however, without a detailed statement of the age distribution of the population. The age groups used in the census statistics do not coincide with the age groups used in the tabulation of death statistics, so that the two sets of figures cannot be used together. Table 10, on page 33, shows the number of deaths of males and females 15 years of age and over, by marital condition.

Nativity. — Of the Massachusetts residents whose nativity was reported on the death certificates in 1937 nearly two-thirds (61.3 per cent) were native, and 38.4 per cent were foreign. There were three-tenths of one per cent whose nativity was not reported.

Seasonal Distribution of Deaths. — The largest number of deaths during any month occurred in January (5,345), and the next largest number in February (5,168). Since the months are not of equal length, the monthly incidence must be reduced to a uniform basis. The average daily number of deaths for 1937 was 141. The months showing the highest average for the year were February (184), January (172), April (158), and March (157). Table 11, on page 33, shows the number of deaths in each month of 1937, in counties, and in cities having over 50,000 inhabitants in 1935.

Infant Mortality.

The infant mortality for residents of the State in 1937 was 43.8 per 1,000 live births. This rate has been moving steadily downward being largely due to the reduction in deaths from gastro-intestinal, respiratory and communicable diseases and is the lowest ever recorded in the Commonwealth. Reference to Table 26, on page 179, shows in striking manner the remarkable reduction in infant mortality, actual decrements without regard for increase in the number of births and without regard for increase in population.

The greatest infant mortality occurred in 1896 (11,765 deaths); and the next greatest actual number of infant deaths occurred twelve years later, 1908 (11,606).

In the ten years from 1928 to 1937, there has been a decrease of 21.3 per cent in the number of live births registered. In 1937, deaths of Boston residents under 1 year of age numbered 587 or 48.5 per 1,000 live births. In the years previous to 1935 the deaths under 1, included nonresidents and the rates were 50.8 per cent in 1936, 49.1 in 1935, 55 in 1934 and 58.9 in 1933. In the ten years from 1928 to 1937 there has been a decrease of 2,850 in the number of live births registered. For the remainder of the State, the number of births registered decreased 23.2 per cent during this period. The infant mortality rates for the State, exclusive of Boston, decreased from 75.6 per 1,000 live births in 1921 to 42.6 in 1937, as compared with a decrease in Boston from 77.2 in 1921 to 48.5 in 1937. (See Table 29 on page 181).

Deaths under one month and also under one year of age in each municipality are shown in Table 25 on pages 177 to 179.

The infant mortality rates in municipalities having 15,000 or more inhabitants in 1935 are shown for the years 1930 to 1937 in Table 27 on page 180.

The highest proportion of deaths occurs in the early period of infancy and especially is this true of the first few days. In 1937, 1,461 deaths occurred in the first week, constituting 54.4 per cent of all deaths under 1 year of age. On the first day the percentage of deaths (34.3) was higher than on any other day. In the first month of life there were 1,744 deaths, or 65 per cent of all infant deaths.

In the first three months there were 2,052 deaths, or 76.5 per cent of all infant deaths. Over three-fourths, 86.7 per cent, of the infant deaths occurred in the first half of the year.

Over three-fourths, 84.2 per cent, of the 1,461 babies who died less than one week after birth, died of prematurity, congenital debility, malformations, or injuries received at birth. Of the 1,553 babies who died from these causes before reaching the age of 1 year 51.8 per cent died in less than one day, 79.2 per cent died in less than one week, and 89.5 per cent died in less than one month. Gastric and intestinal diseases which were formerly important factors in causing infant

deaths have greatly decreased due to the improvement of hygiene and popular education. These causes claimed 115, or 4.3 per cent of the babies who died before reaching 1 year of age, as compared with 5.4 per cent in 1936. Fifteen and seventenths per cent of the babies who died from this cause died in less than one month after birth, 13.9 per cent within one but less than two months after birth, and the same per cent within two but less than three months after birth.

The largest number of deaths of infants is due to developmental and wasting diseases*, and the figures indicate a reduction in infant mortality due to these causes,—from 25.5 deaths per 1,000 live births in 1930 to 21.2 in 1937. Respiratory diseases also caused a considerable number of deaths. The number of infant deaths from bronchopneumonia has decreased somewhat since 1933 when there were 477 infant deaths from this cause, 447 in 1934, 455 in 1935, 374 in 1936, and 392 in 1937. The principal causes of infant deaths for the years 1930 to 1937 are shown in Table 31, page 182.

Causes of Death.¹

Sources of Error in Mortality Statistics. — The chief element of error in mortality statistics lies in the inaccuracy of the statement of the cause of death as reported by the attending physician, who may not have been in a position to feel reasonably certain as to the nature of the terminal illness. Statements of cause of death are often incomplete as a result of the unintentional failure of the physician to state all the morbid conditions known to him which resulted in the death. Again, the physician sometimes fails to enter on the death certificate a qualifying term, which if given would modify the classification of the cause of death.

It should also be borne in mind that the process of classifying the thousands of different terms — some of them of a very indefinite or unsatisfactory character — under the 214 titles of the International List of Causes of Death presents many difficulties which are seldom fully appreciated by those who have not engaged in the work of classification. Even if each certificate of death out of the 52,287 received during 1937 bore only a single cause, the process would present many difficulties. Many certificates, however, bear statement of two or more causes instead of one and a system of selection, according to the precedents and rules of the International Committee, has been adopted by the United States Bureau of the Census, and is used in the Division of Vital Statistics. Because of the complications attendant upon any attempt to show all primary and secondary terms in relation, it becomes necessary to base all statistical compilations of causes of death on the selection of a preferred term. This means that when two or more morbid conditions are given on a certificate one of them must be selected as the cause under which the death must be classified. Special weight has usually been given to communicable diseases when combined with other causes, and assignments are made to external causes when serious enough to be a factor in the cause of death.

Principal Causes. — More than one-half of the 52,287 deaths reported in 1937 were caused by diseases of the heart, cancer, cerebral hemorrhage (including embolism and thrombosis) pneumonia and nephritis. These diseases, together with tuberculosis in all forms, external causes, malformations and the diseases of early infancy caused 81.1 per cent of the deaths for the year. There were 51,739 deaths of Massachusetts residents in 1937, the allocated rate being 11.7 and the registered rate, 11.9. Table 19 on page 167 shows the number of residents of the state who died from these causes.

Heart Disease,* as usual, was the leading cause of death in 1937, the total number being 16,306 corresponding to a rate of 370.2 per 100,000 population as compared with 16,197 deaths or 369.6 per 100,000 in 1936. Massachusetts residents who died from heart disease numbered 16,233 or 368.6 per 100,000 population. The great

¹ In this report an asterisk (*) has been used in the text to denote those certified causes of death which the committee, after careful consideration, reported were acceptable statements of causes of death without autopsy.

increase in the last few years was partly due to the fact that under the revised classification of causes of death diseases of the coronary artery, which were formerly classified as arterial diseases, are now classified under diseases of the heart.

Cancer and other Malignant Tumors showed an increase of 54 and were the cause of 6,831 deaths in 1937, corresponding to a death rate of 155.1 as compared with 154.6 in 1936. Of the deaths from cancer more than one-half, 55.2 per cent were of females. Resident deaths from cancer were 6,669 the rate being 151.4 with cancers of the digestive tract and peritoneum claiming 49.1 per cent of these deaths, cancer of the genitourinary organs 22.8; breast 10.8; respiratory system 5.5; buccal cavity and pharynx 4.1; skin 1.3 and 6.4 per cent were of other or unspecified organs. The death rate from cancer has steadily risen from 89.9 in 1910, to 154.6 in 1936 and 155.1 in 1937. It is possible that at least a part of this increase is due to more correct diagnosis and greater care on the part of the physicians in making reports, but a part at least is due to the lengthened span of life, resulting in a larger number of people reaching the older age groups.

Among the male deaths the per cent distribution was as follows, digestive tract and peritoneum 54.9; genitourinary organs 19.5; breast .3; respiratory organs 8.5; the buccal cavity and pharynx 7.7; skin 1.7 and other or unspecified organs 7.4. The per cent distribution of the female deaths was as follows, digestive tract and peritoneum 44.4; genitourinary organs 25.5; breast 19.3; respiratory system 3.0; buccal cavity and pharynx 1.1; skin 1.0 and other or unspecified organs 5.7.

Of cancer of the digestive tract and peritoneum cancer of the stomach claimed the largest number of males, 18.6 per cent, while cancer of the intestines claimed 16.9 of the females. Among the deaths from cancer of the genitourinary organs 22.8 per cent were of the prostate gland and 39.9 per cent were of the uterus. Almost two-thirds of the deaths from cancer of the lungs were of males 64.9, while 35.1 per cent were of females. In the buccal cavity group cancer of the tongue was responsible for the largest number of both sexes, 24.3 per cent of males and 4.4 of females. More than one-half, 56.8 per cent of the deaths from cancer of the skin were of males while 43.2 per cent were females.

Cerebral Hemorrhage, Cerebral Embolism and Thrombosis* were the causes of 4,355 deaths, or 98.9 per 100,000 population. The death rate from these diseases has fluctuated somewhat, being 100.9 in 1933, 98.4 in 1934, 96.4 in 1935 and 95.6 in 1936. These diseases caused 4,350 deaths of residents, corresponding to a rate of 98.8 per 100,000 population.

Pneumonia (including bronchopneumonia) caused 4,185 deaths in 1937, or 95 per 100,000 population, compared with 4,240 deaths, or 96.7 per 100,000 population in 1936. It also was responsible for 4,174 deaths of residents with a rate of 94.8 per 100,000 population in 1937.

Nephritis*, both chronic and acute forms, was the cause of 3,128 deaths in 1937, corresponding to a rate of 71.0 per 100,000 population, as compared with 71.8 in 1936, 74.7 in 1935, 74.8 in 1934, 78.6 in 1933, and an average rate of 82.1, for the five years from 1928 to 1932. There were 2,994 deaths caused by chronic nephritis, and 55 by acute nephritis. Of the resident deaths 2,965 were from chronic nephritis* and 54 from acute nephritis resulting in a total of 3,019 and a death rate of 68.5 per 100,000 population.

Tuberculosis in its various forms claimed 1,927 victims in 1937, of whom 1,799 died from tuberculosis of the respiratory system.* Deaths due to the latter cause constituted 3.4 per cent of all deaths during the year, the rate being 40.8 per 100,000 population. In 1910 the death rate from tuberculosis of the respiratory system was 133.2. Since then the decline has been continuous from year to year with the exception of 1918 when the rate was 130. However, an increase of .2 per cent per 100,000 population has been noted in 1933. Tuberculosis (all forms) was responsible for 1,887 deaths of residents including 1,761 deaths from tuberculosis of the respiratory system.* The rates for the latter disease were 3.4 per cent of all deaths during the year and 40 per 100,000 population.

Diabetes* was the cause of 1,508 deaths in 1937, an increase of 109 over those reported in 1936 and was responsible for a rate of 34.2 per 100,000 population. The rate from this disease has shown a steady increase for the past five years with the exception of 1935 when the rate was 30.2 per 100,000 population, because of a decrease of 13 from the previous year. In 1936, the rate was 31.9, 30.6 in 1934 and 28.6 in 1933. Residents of the State who died from diabetes numbered 1,495, or 33.9 per 100,000 population. Over two thirds, 67.9 per cent, of the resident deaths from diabetes were of females with the age period 60 to 69 years having the greatest number 26.4 per cent; of the males 11.4 per cent were in this age period also. This disease of adult life was responsible for 91.6 per cent of diabetic deaths over 50 years of age, 68.5 per cent being females and 31.5 per cent males.

Congenital Debility* and Malformations* caused 1,345 deaths in 1937, corresponding to a rate of 30.5 per 100,000 population. The death rates from these causes have shown a steady decline from 109.2 in 1910 (with the exception of 1912, 114.2). There were 1,327 deaths of residents from these diseases, resulting in a rate of 30.1 per 100,000 population.

Alcoholism and Cirrhosis of the Liver* (specified as alcoholic, etc.) were responsible for 633 deaths in 1937, corresponding to a rate of 14.4 per 100,000 population. Of these 190 were due to alcoholism which is a decrease of 18 from those reported in 1936, corresponding to a rate of 4.3 per 100,000 population. These diseases caused 624 deaths of residents with a rate of 14.2 per 100,000 population. Alcoholism claimed 188 of these, or 4.3 per 100,000 population.

Maternal Mortality.* Deaths from puerperal causes of residents of the state in 1937 totalled 252, corresponding to a rate of 40.4 per 10,000 confinements. This rate was a decrease from 1936, the rate being 44.6 and 51.2 for 1935.

Puerperal septicemia* was responsible for 67 resident deaths including 13 due to abortion with septic conditions, the rates for this cause in 1937 being 10.7 per 10,000 confinements. In 1936 the rate was 13.2 and in 1935, 16.3. Of the deaths from these diseases, 32 were from 20 to 29 years of age, 3 were under 20 years of age and the remainder, 32, were from 30 to 44 years of age.

Diarrhea and Enteritis* caused 238 deaths in 1937, or 5.4 per 100,000 population. Fifty-two and one-tenth per cent of the total number of deaths charged to these causes in 1937 were of infants under 2 years of age. The rates from this cause for all ages were 6.8 in 1933 and 1934, 7.6 in 1935 and 6.0 in 1936. During 1937 deaths of residents totalled 231, from these causes, or 5.2 per 100,000 population. The number of infants under 2 years of age was 124 or 53.7 per cent of the total number claimed by these diseases.

Principal Communicable Causes. (See Table 29.) The deaths from epidemic and infectious diseases have shown a great decline in the last 25 years. While certain of these diseases have fluctuated considerably during this period they have, on the whole, shown a steady decrease.

Influenza was responsible for 435 deaths, or 9.9 per 100,000 inhabitants, as compared with 13.6 in 1935, 6.2 in 1934, 7.4 in 1933, and 6.5 in 1936. The number of Massachusetts residents was 432, or 9.8 per 100,000 population. In 1918 there were 13,783 deaths from this cause, corresponding to a rate of 352.7 per 100,000 population. Since 1921 this rate has fluctuated from 3.9 to 27.9 in 1929.

Whooping Cough,* one of the principal epidemic maladies of childhood, was responsible for 95 deaths of both adults and children, the number of resident deaths being the same, or 2.2 per 100,000 population. This is an increase over 1936 of 1 per cent.

Measles,* another childhood disease, caused 28 deaths in 1937, or .6 per 100,000 population. This rate was .8 in 1936, .9 in 1935, 2.1 in 1934 and .6 in 1933. The total number and death rate for deaths of residents were the same in 1937.

Scarlet Fever,* another epidemic disease of childhood, was the cause of 38 deaths in 1937, corresponding to a rate of .9 per 100,000 population. These rates have changed from year to year during the period 1913 to 1937, the highest being 8.2 in 1913 and the lowest, .9 in 1937. The number and rate for resident deaths were the same in 1937.

Diphtheria and Croup* — which are classed together in the statistics, but practically all of which are of diphtheria — number 18, or .4 per 100,000 population. There has been a decided decrease in this disease since 1900 when the number of deaths was 1,475, with a corresponding rate of 52.6 per 100,000 inhabitants. This rate was .6 in 1936 and 1935, 1.2 in 1934, and 2.0 in 1933. The total and death rate for deaths of residents were the same in 1937.

Epidemic Cerebrospinal Meningitis claimed 72 victims in 1937, as compared with 100 in 1936, 54 in 1935, 28 in 1934 and 25 in 1933. The rate for this cause was 1.6 per 100,000 population. This disease was responsible for the same number of deaths of residents.

Encephalitis Lethargica, commonly known as sleeping sickness, is a comparatively new disease and has varied little in the last five years, the number of deaths in 1937 being 14, 14 in 1936, 16 in 1935, 25 in 1934 and 16 in 1933. The resident deaths had the same total in 1937.

Dysentery caused 10 deaths in 1937, also being responsible for the same number of resident deaths. There were 10 in 1936, 8 in 1935, 24 in 1934 and 9 in 1933.

Typhoid Fever* has shown a steady decline since 1910, having dropped from 12.2 in that year to .3 in 1937. This decline is greater, relatively, than that shown for any other important cause of death. The total number of deaths due to typhoid fever in 1937 was 14, as compared with 10 in 1936 and 1935, 14 in 1934 and 24 in 1933. The number and death rate for resident deaths were 13 and .3 respectively during 1937.

Acute Poliomyelitis* has shown an increase for 1937, the number of deaths being 23, or .5 per 100,000 population, as compared with .2 in 1936, 1.4 in 1935, .2 in 1934 and .7 in 1933. Death of residents totalled 22, or .5 per 100,000 population.

There were no deaths from Smallpox in 1937.

Violent Deaths. Death rates from violence during the past five years per 100,000 population were 81.2 in 1933, 88.4 in 1934, 85.1 in 1935, 85.0 in 1936 and 85.5 in 1937. The death rate from violence was 84.9 per 100,000 population for resident deaths in 1937.

Deaths due to Railroad Accidents and Injuries* totalled 67 in 1937, and corresponded to a rate of 1.5 per 100,000 population. The rates for the previous years were 1.7 in 1936 and 1935 and 1.7 in 1934. Resident deaths numbered 64 in 1937 with a rate of 1.5 per 100,000 population.

Deaths resulting from street-car accidents and injuries* numbered 17 or .4 per 100,000 population. The resident deaths had the same total and rate.

Automobile Accidents and Injuries* caused 878 deaths in 1937, including 8 deaths from automobile and railroad collisions, and 1 death from automobile and street-car collisions. The rate was 19.9 per 100,000 population, as compared with 20.3 in 1936, 19.5 in 1935 and 23.4 in 1934. These accidents caused 864 deaths of residents in 1937, or 19.6 per 100,000 population. Of these, 9 deaths were from automobile and railroad collisions. There were no deaths from automobile and street-car collisions. No accurate data are available for measuring the death rate per number of automobiles in use, as the statistics compiled by the Department of Public Works show the number of machines registered, and thus contain duplications, since one machine may be registered more than once in a calendar year. It is probable, however, that the increase has not been so rapid as that of the number of machines in use.

Effects of Heat.— In 1937 the deaths from this cause numbered 72. In 1936 there were 14 deaths; in 1935, 20; in 1934, 24; and in 1933, 23. The total deaths of residents from this cause were the same in 1937. The highest temperature recorded

in 1937 was 99 degrees on July 8. The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1926 was 103 degrees on July 22.

Deaths caused by machinery accidents* in 1937 numbered 38, or .9 per 100,000 population. The corresponding figures for previous years were .8 in both 1933 and 1934 and .9 in 1935 and 1936. Deaths of residents had the same number and rate in 1937.

The number of suicides* reported in 1937 was 650, or 14.8 per 100,000 population. The rates since 1932 have been: 1933 and 1934, 13.8; 1935, 13.2; and 1936, 13.0. Resident deaths from suicide in 1937 numbered 642 or 14.6 per 100,000 population.

Deaths caused by firearms numbered 179 in 1937, corresponding to a rate of 4.1 per 100,000 population. Of these deaths 123 were suicides, 34 were homicides, and 22 were accidental (including those concerning which the status as to suicide, homicide, or accident was in doubt). The total resident deaths caused by firearms in 1937 were 176, or 4.0 per 100,000 population. These deaths included 122 suicides, 32 homicides, and 22 accidents.

Deaths from homicide* numbered 88 in 1937, or 2.0 per 100,000 population. The rates for homicide in recent years are 2.6 in 1933, 2.1 in 1934, and 1.7 in 1935 and 1936. There were 85 resident deaths from homicide in 1937, or 1.9 per 100,000 population.

The causes of deaths of males and females for each month for the Commonwealth for the complete International List of Causes of Death with certain subdivisions are shown in Table 13, on pages 35 to 53. The causes denoted by letters, shown separately in indented type, Table 13, are a part of the total cause shown in the International List. Ages, grouped in five year periods, are shown in Table 14, on pages 54 to 89. For comparative purposes those residents of other states dying in Massachusetts are shown in Table 15 by months and age periods according to the International List while those of residents of Massachusetts dying out of the State are shown in Table 16. In Table 17, on pages 120 to 144, the deaths are shown for 50 causes and groups of causes for each municipality.

For the Commonwealth as a whole the deaths and death rates for the seven years 1931 to 1937 are shown for the 38 causes and groups of causes in the Abridged International List in Table 21, on pages 168 and 169. The relation of this list to the Detailed International List is shown in the Appendix. In addition to the above presentations, certain other tables showing the causes of deaths are presented on pages 170 to 204.

Deaths Investigated by Medical Examiners.

Source of Data.—The statistics of death investigated by medical examiners published in this report are based upon annual returns made by medical examiners and associate medical examiners to the Secretary of the Commonwealth of abstracts of the records of deaths supposably due to violence, the cause and manner of which have been investigated during the year. Deaths supposably due to violence include not only deaths caused directly or indirectly by traumatism (including resulting septicemia), and by the action of chemical (drugs and poisons), thermal, or electrical agents, and deaths following abortion, but also deaths from diseases resulting from injury or infection related to occupation, the sudden deaths of persons not disabled by recognized disease, and those of persons found dead.

Medical examiners are often called upon to view cases in which the death was not due to violence (heart disease, apoplexy, etc.) but where the death was simply sudden or where no physician had been in recent attendance. Medical examiners are also required to certify that they have viewed bodies to be cremated, and to make personal inquiry into the cause and manner of death.

Number of Deaths Investigated.—The number of deaths investigated by the medical examiners in 1937 was 10,069, or 18.8 per cent of the total number of deaths which occurred during the year, as compared with 9,788 deaths in 1936, or 18.8 per cent of the total number of deaths. Over two-thirds (67.2 per cent) of these

deaths were of males. Of the deaths investigated by medical examiners, 3,507 or 34.8 per cent, were reported as due to violence, while among the deaths returned to the registrars, 3,764 were reported as due to violence.

The largest number of cases investigated by medical examiners in 1937 was in Suffolk County, 2,573, as compared with 2,434 in 1936. Of the deaths investigated in Suffolk County, 884, or 34.4 per cent, were reported as due to violence (see Table 39, page 205).

Autopsies.—Autopsies were made in 1,024, or 10.2 per cent, of the cases investigated by the medical examiners in 1937, as compared with 9.3 per cent in 1936, 8.8 per cent in 1935, 8.6 per cent in 1934 and 8 per cent in 1933.

The highest proportion of autopsies was in Suffolk County where 23.9 per cent of the views were autopsied, there being 21.8 per cent in 1936. Table 41, on pages 212 and 213, shows the number of views and the number of autopsies in each county in each year from 1928 to 1937, and the number and per cent of views autopsied for the ten-year period, 1928 to 1937.

Cause of Death.—Over one-half (53.8 per cent) of the deaths viewed by medical examiners in 1937 were from causes not due to violence, 34.8 per cent were due to violence, and .7 per cent were stillbirths. One thousand and seventy-five, or 10.6 per cent of the views were for cremations.

Deaths from causes not due to violence numbered 5,415, of which 5,202 were from natural causes and 193 were due to alcoholism.

Deaths due to violence numbered 3,507 of which 2,758 were due to accident or negligence, 658 were suicides, and 91 were homicides.

Of the 2,758 deaths due to accident or negligence, 1,045 were due to falls, blows, and falling bodies, 867 were due to automobile accidents, 11 of which were railroad and automobile accidents, 238 resulted from drowning, 60 were due to railroad accidents, and 548 to other causes. There were no street-car and automobile collisions.

Suicides numbered 658, or 18.8 per cent of the deaths due to violence. Suicides committed by the use of illuminating and other gases, 162, and by hanging or strangulation, 164, constituted about one-half (49.5 per cent) of the total number. The number of suicides by firearms was 122, by poisons, 72, by drowning, 74, and other methods, 64. Over three-fourths (75.4 per cent) of the suicides were males.

Of the 658 persons committing suicide, 143 were 50 to 59 years of age, 162 were 40 to 49 years of age, 112 were 30 to 39 years of age, 55 were 20 to 29 years of age, 175 were over 60 years of age, and 11 were under 20 years of age. Among the male suicides the largest numbers were from 40 to 49 years of age, 124, and from 50 to 59 years, 106, while among the female suicides the largest numbers were from 40 to 49 years of age, 38, and 50 to 59 years of age, 37. The most common method of committing suicide was by hanging or strangulation.

Homicide numbered 91, of which 36 were by firearms, 9 were by cutting or piercing instruments, 38 by other means, and 8 were cases of infanticide. Of the 91 homicides, 59, or 64.8 per cent, were males.

¹ Deaths from heat for the year 1925 numbered 135. This is the nearest approach to the high mark since 1911 when the total number of deaths from this cause was 614.

The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1925 was 100 degrees on June 6.

The average monthly temperature for the months of June, July, and August, in 1911 and 1925, was as follows:

	June.	July.	August.
1911 . . .	65.6	77.1	69.0
1925 . . .	70.9	72.4	71.2

² Allocated.

INTRODUCTION.

Birth Registration. — Birth registration has been compulsory in Massachusetts since Colonial times. It was one of the first States to be included in the registration area of the United States Census Bureau. Probably no State claims 100 per cent birth registration; but the results in Massachusetts on the whole are considered to be far above the average and efforts are continually being made for its improvement.

The physician* in attendance at the birth of a child is required, within forty-eight hours, to give notice and make a complete return within fifteen days of the facts required for record to the clerk of the town of birth. Parents, within forty days, are required to give notice to the registration official of every child born to them.

In addition to the above, persons in charge of a hospital, almshouse, or other institution, public or private, are required to give, on or before the fifth day of each month, notice to the town clerk of every birth occurring among the persons in such institution during the preceding month. The law also provides that the clerk of each town may annually in January ascertain the facts required for record of all children born in his town during the preceding year and resident therein.

Returns are made in the first instance to the local clerks of the city or town in which the birth occurred with the exception of Boston where the City Registrar is the official in charge.

The records on file in the Division of Vital Statistics are attested copies of the originals filed with local officials. The law has required the filing at this central record office since 1841. During this time 5,464,354 births have been filed and indexed. Since the establishment of the office of State Registrar of Vital Statistics in 1918, a systematic campaign has been carried on to obtain prompt and complete compliance with the birth registration laws. People are generally beginning more and more to realize the importance of birth records, so complete registration should soon be an accomplished fact.

Importance of Birth Records. — Records of birth are becoming more important every day. Government agencies as well as many other civil bureaus are demanding proof of citizenship through birth certificates. As Massachusetts is one of the few states that have records previous to 1912 there is a great demand at all times. For an example, during July and August an unprecedented rush of applicants appeared at the office for certificates, as the W. P. A. demanded proof of citizenship. These employees came in large numbers to the Division of Vital Statistics. These demands were met and the office force on one day issued 1,172 records and in a period of ten days, 9,680 certificates were issued. During the year

* Midwives are not recognized in Massachusetts. It has been held that the practice of midwifery is the practice of medicine, and as there is no provision under the law for licensing midwives, any one who practices midwifery is violating the medical registration laws.

there were 52,177 applications for birth records which was an increase of 25,635 over the previous year. This great demand for birth records will continue as they are also required for Old Age Assistance and Social Security.

There is hardly a relation of life, social, legal, or economic, in which the evidence furnished by an accurate registration of births may not prove to be of the greatest value, not only to the individual, but also to the public at large. It is not only an act of civilization to register Birth Certificates, but also good business, for they are frequently used in many practical ways:

1. As evidence to prove the age and legitimacy of heirs;
2. As proof of age to determine the validity of a contract entered into by an alleged minor;
3. As evidence to establish age and proof of citizenship and descent; in order to vote;
4. As evidence to establish the right of admission to the professions and to many public offices;
5. As evidence of legal age to marry;
6. As evidence to prove the pension claims of widows and orphans;
7. As evidence to determine the liability of parents for the debts of a minor;
8. As evidence in the administration of estates, the settlement of insurance and pensions;
9. As evidence to prove the irresponsibility of children under age for crime and misdemeanor, and various other matters in the criminal statute;
10. As evidence in the enforcement of laws relating to education and to child labor;
11. As evidence to determine the relations of guardians and wards;
12. As proof of citizenship in order to obtain a passport;
13. As evidence in the claim for exemption from or the right to jury and militia service.

Copies of records of births occurring during the preceding year are required to be forwarded annually to the Division of Vital Statistics.

After the statutory period has elapsed for filing copies of the records with the Department of the Secretary of the Commonwealth, no delayed returns or corrections are accepted unless by a deposition made by the parents, supported by written evidence at the time of birth, or by deposition of the attending physician at the time of birth, based upon a writing made at the time by a person since deceased charged with making the return in the first instance. As the evidential value of a record depends for its authenticity upon the fact that it is made contemporaneously with the happening of the event recorded, the registrars are required to exercise considerable care by requesting written evidence made soon after the time of birth before accepting delayed returns, particularly if it is some years after the birth occurred. This holds true of corrections which can only be made in accordance with the facts as they actually existed at the time the birth occurred, with the exception of an illegitimate child who is legitimized through the subsequent marriage of its parents; in these cases the record may be amended, so that the child will appear on the record as the legitimate offspring of its parents. Birth records of children who have been adopted through judicial decree may be amended so that the amended record will appear as if the child were the natural child of the adoptive parents.

As a means of eliminating errors from physicians' returns of births, many local registrars are sending a supplemental report of the physician's return to the parents for their approval; and when the certificate is returned properly signed by a parent, it is filed with the physician's certificate. This is a splendid system as it eliminates any claim later that an error has been made in the return of birth. Many cities and towns have already adopted this follow-up system, and an attempt is being made to institute this method throughout Massachusetts.

Certain Records Impounded.—Returns and records of illegitimate and abnormal sex births are impounded by statute from inspection. The law prohibits the issuance of copies of such records to the general public. These records can be inspected or copies issued only to the child, the mother, attorney for the child, its legal guardian or to others by order of the court.

Allocation.—Births are charged to the place of the event and also are allocated to the place of residence of the parent. This insures as near a true rate as possible and has a marked effect on municipalities which are large hospital centers. These cities and towns in the past have been charged with a high rate and small communities without hospital facilities have shown a low rate. The usual place of residence has been used as a basis for all births occurring outside the State as well as for those in the State. In the case of institutions, births have been allocated to the place of residence before entrance.

Live Births.—In the Commonwealth in 1937 there were 62,222 live births, registered, an increase of 319, or .5 per cent as compared with the number registered in 1936. There was an increase in 1937 of 1,392, or 3.2 per cent in the number of infants born to native parents; a decrease of 1,014, or 13.5 per cent to foreign-born parents; and also a decrease of 60, or .5 per cent, to mixed parents, namely, one parent native, the other foreign-born, as compared with 1936. The allocated births numbered 61,272 for 1937.

Birth Rate.—In proportion to the total population, the total births registered were equivalent to a rate of 14.1 per 1,000 population, and is the lowest rate ever recorded in the Commonwealth. This was the same as that recorded in 1936, and .6 per 1,000 below the average for the five years 1932 to 1936. The allocated births for 1937 lowered the birth rate to 13.9.

Changes in Birth Rate.—The birth rate for the Commonwealth attained the highest point on record, 30.2 in the year 1857. Since then the rate, although fluctuating considerably, has shown a considerable decline, and a steady decline since 1924, notwithstanding an improvement in the registration. Although the birth rate has been smaller in recent years, the infant death rate has also declined, the infant mortality rate for 1937 being the lowest ever recorded, so that the number of babies who survive the dangers of infancy is becoming steadily greater. This fact is strikingly shown in the infant mortality tables.

Stillbirths.—The Legislature has enacted legislation (Chap. 100, Acts of 1936) defining stillborn children for the purposes of Vital Statistics: "A stillborn child shall be deemed to be a foetus born after a period of gestation of not less than five months, in which foetus there is no attempt at respiration, no action of heart and no movement of voluntary muscle—". In the past there has been no statute defining a stillbirth, consequently many returns have been made which, under this definition, would not have been returned. As the statute now clearly defines a stillbirth and precludes any misunderstanding as to what returns should be made, there should be fewer returns of stillbirths.

Stillbirths allocated in 1937 number 1,744. The rate per 1,000 live births registered was 29.4 in 1936; 30.2 in 1935; 31.3 in 1934; 34.2 in 1933; and 34.3 in 1932. The rate per 1,000 allocated births was 28.5 per cent in 1937.

Birth Rates, Highest.—The six municipalities having 15,000 inhabitants or more showing the highest registered birth rates in 1937 are: Norwood, 28.1; Milford, 26.1; Winthrop, 25.2; Weymouth, 24.3; Pittsfield, 21.3; and Gardner, 21.2.

Variations in the birth rates of different communities may be partially accounted for by differences in the proportions of married women of child-bearing age residing therein, and by the presence of hospitals to which expectant mothers go from neighboring cities and towns in order to take advantage of the best medical advice and obstetrical care during pregnancy and childbirth. The allocated birth rates help to substantiate this statement. The six communities showing the highest rates are: Everett, 17.2; Pittsfield, 16.4; Fitchburg, 16.3; Somerville, 16.2; Woburn, 15.8; and Leominster, 15.7. Boston, which showed the highest registered rate (19.0) of any place in the State of over 100,000 population loses to Somerville (16.2) by the allocation of births.

Sex Proportion at Birth.—It has never been determined whether the higher proportion of masculine than of feminine births is the result of definite causes or not. Registered births of males in 1937 numbered 32,135 and those of females 30,087, corresponding to a ratio of 1,067 male births to 1,000 female births. Allocated births numbered 31,623 males and 29,649 females in 1937, with a ratio of 1,055 male to female births.

Nativity of Parents.—The number of registered births where both parents were native (44,284) exceeded the number of births where both parents were foreign-born (6,524) by 37,760, or 578.8 per cent in 1937. Children of mixed parents (one parent native and one parent foreign-born) numbered 11,409 in 1937 as compared with 11,469 in 1936. Allocated births numbered 43,497 children born of native parents; 6,472 of foreign parents, 11,299 of mixed parentage and 4 whose parent nativity was unknown.

The proportion of children born of native parents declined from 1890 until 1910, since then, the proportion has steadily increased. In 1937 the proportion was 71.2 for registered births and 71 per cent for allocated births.

The proportion of children born of parents one of whom was native and the other foreign-born was 18.3 for the registered and 18.4 for the allocated births in 1937 as compared with 18.5 in 1936 for the registered births and 18.0 for the allocated births.

Plural Births.—In 1937 there were 624 cases of plural births (allocated), 622 cases of twins and 2 cases of triplets, or 10.2 pairs of twins per 1,000 live births (allocated), and less than one-tenth of one case of triplets.

Natural Increase.—The excess of the birth rate over the death rate shows the ratio at which the community is reproducing itself by natural increases. In every year since the compilation of birth statistics was started the birth rate has been higher than the death rate.

The rate of natural increase for 1937 was 2.2 per 1,000 population for registered births and averaged 3.1 for the five years 1932 to 1936. The rate of increase was the same for allocated births.

Notwithstanding the decline in the birth rate in recent years, the number of births is greatly in excess of the number of deaths; and this fact coupled with the steady decrease in infant mortality, has resulted in a net gain in the natural increase in population. The excess of births over deaths amounted to 19.0 in 1936; 25.3 in 1935; 25.6 in 1934; 24.8 in 1933; and 38.3 in 1932. The excess of registered births over registered deaths in 1937 was 9,935, or 19.0 per cent, while the increase of allocated births over allocated deaths was 9,533 or 18.4 per cent.

For comparisons previous to 1900 relative to the natural increase from 1851, and for figures from that date up to and including 1919, reference may be made to the Annual Report of Vital Statistics of Massachusetts for the year ending December 31, 1919, Public Document No. 1.

INTRODUCTION.

Marriage Registration. — The public registration of marriages has been required for many years in Massachusetts. Records of marriage are made in the first instance in the cities and towns of the State where the contracting parties dwell and if the ceremony is solemnized in a town other than where the parties reside, in the town where the ceremony is performed.

Since 1841 it has been required that copies of these records be forwarded annually to the Secretary of the Commonwealth and from 1841 to 1937, inclusive, there have been 4,991,832 marriages reported, recorded and tabulated in this department.

Source of Data. — The marriage statistics in this report are compiled from attested copies of the records of marriages recorded in every city and town. Persons intending to be joined in marriage in Massachusetts must file a notice of intention in the town in which they respectively dwell, and this notice of intention must contain the facts required for record and be sworn to by each of the parties to the marriage. If a marriage is performed in a town other than the town issuing the license, a copy of the license must be made and forwarded by the clergyman or magistrate to the clerk of the municipality in which the ceremony was performed. Five days after the notice of intention is filed the marriage license may be issued with all the facts set forth in the notice of intention which are required for record. This certificate is presented to the clergyman or magistrate before whom the marriage is performed, and the facts as to the ceremony are certified by that person. Between the first and tenth days of the month following the ceremony the license or licenses must be returned to the office or offices issuing the same.

Solemnization. — A marriage may be solemnized in any place within the Commonwealth by a minister of the gospel who resides in the Commonwealth, or, who if a nonresident is the pastor of a church or denomination duly established in the Commonwealth and who is recognized by his church or denomination as duly ordained and in good and regular standing as a minister of such church or denomination; by a rabbi of the Israelitish faith, duly licensed by a congregation of said faith established in the Commonwealth, who has filed with the clerk or registrar of the city or town where such congregation is established a certificate of the establishment of the synagogue therein, the date of his appointment thereto, and of the term of his engagement; by a justice of the peace if he is also clerk or assistant clerk of a city or town, or a registrar or assistant registrar, in the city or town where he holds such office, or, if he is also clerk or assistant clerk of a court, in the city or town where the court is authorized to be held, or, if he has been designated as a justice of the peace to solemnize marriages in the city or town where he resides; and it may be solemnized among Friends or Quakers according to the usage of their societies; and a specified marriage may be performed by a nonresident clergyman commissioned by the Governor in accordance with the provisions of Chap. 102 of the Acts of 1926; but no person shall solemnize a marriage in the Commonwealth unless he can read and write the English language.

When Massachusetts residents go into another state to be married and return to live in this Commonwealth they are required within seven days after their return to file a declaration of their marriage with the clerk of the town where either of them resided at the time of their marriage. A penalty is provided by statute for non-compliance with the law.

Accuracy. — The registration of marriages presents fewer difficulties than the registration of birth and death records and the statistics should be nearly 100 per cent perfect.

Every precaution has been taken to see that the statutes pertaining to the solemnization of marriage are strictly enforced, but as there is no public registration of ministers of the gospel in Massachusetts, it is not always possible to get in touch with the persons responsible for making returns of marriages solemnized by them. To guard against the possibility of marriages being performed on one license where two are required, on an out-of-state license, or on a license that has become invalid because of lapse of time, a circular setting forth the requirements before and after solemnizing a marriage has been prepared, together with a copy of the marriage laws and these are forwarded, upon request, to all persons interested, and are sent to the city and town clerks, together with posters setting forth the legal impediments to marriage, which are required to be posted in their offices.

The errors in solemnizing and returning a record of marriage, if any, are due to the lack of information as to the requirements of the statute rather than to any wilful attempt to evade the requirements of the law.

Marriage licenses issued to residents are valid throughout the Commonwealth, regardless of the residence of either party and many marriages are performed in cities and towns other than the place where either party lived. Persons who do not reside in the Commonwealth must file their intention with the clerk of the city or town where they propose to have the marriage solemnized and the marriage must be solemnized in that particular municipality.

The principal source of error in the records of marriage comes about through the carelessness or ignorance of one of the parties in filing the notice of intention as to the facts concerning the other party. Therefore, it sometimes happens that records for the same marriage coming from different towns do not contain the same information. Names and other facts will be at variance. These certificates are compared in the Division of Vital Statistics and every effort is made to have the certificates agree, but considerable confusion and delay follow from this situation.

Purpose. — The practical purposes of marriage records are:

1. As evidence to establish dower and curtesy rights of husband and wife.
2. To prove legality as to claims of inheritance.
3. As evidence upon which to base subsequent records concerning the parties.
4. For Governmental pension purposes.
5. For pensions under Employees Pension Laws.
6. For insurance, pension and retirement purposes.
7. To establish legal settlement for public aid and the settlement of dependent children of parents.
8. For naturalization and passport purposes.
9. To prove legitimacy of children.

The following tables contain the number of marriages solemnized:

INTRODUCTION.

Causes for Divorce. — Causes for which divorce from the bonds of matrimony may be granted in Massachusetts under the provisions of Chapter 208, Sections 1 and 2 of the General Laws, are as follows: —

1. Adultery.
2. Impotency.
3. Desertion for three consecutive years next prior to the filing of the libel.
4. Gross and confirmed habits of intoxication caused by the voluntary and excessive use of intoxicating liquor, opium or other drugs.
5. Cruel and abusive treatment.
6. Neglect to provide.
7. Sentence to imprisonment at hard labor for five years or more.

A marriage may be declared void in consequence of violation of the provisions of the laws concerning marriage; that is, a separation may be granted because of the demonstration of conditions obtaining at the time of, or previous to, the alleged marriage, which show that there never was a legal marriage.

Source of Data. — The statistics of divorce presented in this report are compiled from returns made to the Secretary of the Commonwealth annually by the clerks of courts and registers of probate for the several counties.

In Massachusetts there is no central record office for divorces, the statistics only being returned as stated above. The records remain with the clerks or registers.

Previous to 1922 the superior court only had jurisdiction in such matters. Under the provisions of General Laws, Tercentenary Edition, Chapter 208, the probate court now has concurrent jurisdiction with the superior court to hear libels for divorce and to determine the same in a similar manner.

Applications for Divorce. — The courts granted over 4 petitions out of every 5 filed. This proportion fluctuated considerably during the twenty-five years from 1913 to 1937, the highest proportion of applications being granted in 1937 (89.9 per cent), and the lowest proportion in 1929 (71.1 per cent). During this entire period 84.1 per cent of all applications were granted, .6 per cent were refused, and 15.3 per cent were dismissed.

Contested Cases. — Of the total number of applications for divorces during the twenty-five years from 1913 to 1937, only 20.2 per cent were contested. In 1937 of the 5,216 applications for divorce, only 1,480, or 28.4 per cent, were contested, and of the 4,687 divorces granted, 1,144, or 24.4 per cent, were contested. The proportion of contested cases is larger for divorces granted to the wife (25.1 per cent) than for those granted to the husband (22.4 per cent).

Number of Divorces. — Divorces granted in 1937 numbered 4,687, an increase of 376, or 8.0 per cent more than the number granted in 1936, and 929 more than the average number granted for the five-year period 1932 to 1936.

Divorce Rates. — The number of divorces granted per 100,000 population was 106.4, as compared with 98.4 in 1936, 93.8 in 1935, 84.0 in 1934, and 74.3 in 1933.

Divorce rates based on the married population, i.e., the number of divorces per 100,000 married population, are more significant than rates based upon the total population, because of the elimination of possible variations in the proportion married, and because of the fact that divorce can arise only among the married. Rates calculated in this manner are shown in Table 66, page 261, for the census

years 1910 to 1935. In this table the number of divorces shown for the census years 1910 to 1935 is not the actual number in that year, but the annual average for the five-year period of which the census year is the median. This method eliminates any peculiarities in the census year which may have affected divorce and makes the figures more typical of the period as a whole.

Party to Which Granted. — Over two-thirds (73.5 per cent) of the total number of divorces in the period 1913 to 1937 were granted to the wife. In other words, divorces obtained by the wife are more than twice as numerous as those obtained by the husband. It may be that husbands more often than wives give occasion for divorce but the difference may be partially explained by the fact that without any reference to the question of which party is the more frequently responsible for the marital unhappiness, the wife has more legal grounds for divorce than the husband, because certain well known and comparatively common grounds are more readily applicable against the husband than against the wife. For example, neglect to provide, a common legal cause for divorce on the part of the wife and cruelty, in so far as it is physical cruelty, are not ordinarily available grounds for a husband, although men are sometimes granted divorces on the ground of cruelty.

Moreover, where each party desires divorce, it is more likely that the wife, more often than the husband will make the application, since a cause for which the wife would be granted a divorce might reflect less favorably upon the parties than would a cause for which the husband might be granted a divorce.

The proportion of divorces granted to the wife fluctuated between 69.3 per cent in 1913, and 76.6 in 1935, as compared with 73.5 per cent for the entire period of 1913 to 1937.

Divorces Classified by Causes. — The statistics concerning the cause of divorce deal with the legal cause as ascertained from the court records. It should be borne in mind, however, that the cause for which a divorce is granted by the courts is not necessarily the underlying reason for the marital unhappiness, and that the value of statistics of divorce as an index to the actual causes is as a consequence impaired.

Divorces granted on the ground of desertion have nearly doubled in the twenty-five-year period 1913 to 1937, while the number of divorces granted for adultery has decreased slightly.

The most common ground on which divorce was granted by the courts was desertion, which accounted for 44.8 per cent of all the divorces granted in the period 1913 to 1937, for 38.9 per cent of all those granted to the husband in this period, and for 61.1 per cent of those granted to the wife.

The number and per cent of divorces granted for all causes, to the husband and to the wife, for the twenty-five-year period 1913 to 1937, are shown in Table 68, page 262.

Annulled Cases. — Among the less important classes of cases appears the term "Annulments." In 1,033 cases, or 1.2 per cent of the total number of divorces granted during the period 1913 to 1937, there was some cause shown which may have existed at the time of marriage. These cases form but a small proportion of all cases considered, and do not affect the results to any material degree.

Duration of Marriages. — The average number of years libellants were married at the time of application for divorce has fluctuated between 10.2 years in 1928 and 11.2 years in 1913. The average number of years the libellants were married in 1937 was 10.7.

Of the total libellants in Massachusetts for whom the number of years married was reported in 1937, 53.1 per cent made application for divorce before they had been married ten years, as compared with 54.2 in 1936, 55.5 in 1935, 55.9 in 1934, 57.2 in 1933 and 54.9 for the twenty-five year period 1913 to 1937.

PART II. D.

POPULATION STATISTICS

	PAGE
Introductory	265
Estimated population	265
Statistical table	266

Introductory. — All vital statistics are based upon the population. The number of births, marriages, divorces and deaths is expressed in relation to the population, usually as rates giving the number occurring during the calendar year per 1,000 inhabitants or group of inhabitants, such as age groups, sex, nativity, race, marital condition, and occupation groups.

Information regarding population is obtained by a census enumeration, and in Massachusetts these enumerations are made every five years. The statistics for 1937 in this report are based on the Federal census taken as of April 1, 1930, and the State census taken as of January 1, 1935.

The population of any community or State is continually changing, in most cases increasing, and for this reason it becomes necessary to make estimates of the population for the periods between the census enumerations upon which to base rates for the various vital events, and especially for the accurate computation and expression of birth, marriage, divorce, and death rates. Such estimates are necessary for all dates except those on which the census enumerations are made, and are in all cases preferable to a repetition of the census returns for a certain year.

For non-census years the statistical tables in this book are based upon the estimated population as determined by the arithmetical method, which assumes a constant amount of increase between the census years.

Estimated Population. — The method of calculating estimates of population for the intercensal years is shown in the following example:

Massachusetts had a population of 4,350,910 at the State census of 1935 (January 1), and of 4,249,614 at the Federal census of 1930 (April 1). The increase during the intercensal period (57 months) was 101,296, and the monthly increase according to the arithmetical method of estimating population, was —

$$\frac{4,350,910 - 4,249,614}{57} = 1,777$$

The same annual increase is also assumed to occur until the next census shall have been taken. The population for June 30, 1937, is estimated by adding to the population as it existed at the preceding census (January 1, 1935), 1777 for each month intervening between the date of enumeration and the date for which the estimate is desired (June 30, 1937). There being 30 months between these dates, the calculation would be

$$4,350,910 + (30 \times 1777) = 4,404,220.$$

The census population for each municipality in the Commonwealth having over 15,000 inhabitants in 1935 is shown on page 266.

¹Hyde Park (in Norfolk County), annexed to Boston (in Suffolk County) in 1911, contained 15,507 inhabitants in 1910. No other counties have had their boundaries changed since 1874.

²Abnormal decrease between 1910 and 1915 due to conflagration of June 25, 1914.

APPENDIX

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH

1. DETAILED INTERNATIONAL LIST
2. ABRIDGED INTERNATIONAL LIST

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH.¹

There are two separate and distinct classifications of causes of death embodied in the International List of Causes of Death, these are the detailed and abridged International Lists. The former, as indicated by its name, presents causes of death in greater detail than does the latter; that is, it shows separately certain diseases which in the abridged list are grouped together for presentation. The majority of the titles of the abridged list are therefore consolidations of certain titles of the detailed list. The shorter list is used as a basis for certain tables in this volume for which it is either unnecessary or impracticable to present data for each disease and cause of death shown in the detailed list.

The distinction between these lists should always be considered when using the tables of these reports. There are several cases in which the title headings in the two lists are identical, but the causes included are widely at variance. As an example of this, the title "Other infectious and parasitic diseases" of the detailed list (title No. 44) includes only such epidemic maladies as are not classified separately in titles 1 to 44 of that list; but "Other infectious and parasitic diseases" of the abridged list includes titles 4, 5, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 33, 35, 36, 37, 39, 40, 41, 42, 43, and 44 of the detailed list.

An asterisk (*) denotes that, in the opinion of the committee appointed by the Section on Vital Statistics of the American Public Health Association, the titles are acceptable statements of causes of death without autopsy.

The following table shows each title of the Detailed International List:—

1. DETAILED INTERNATIONAL LIST.

I. INFECTIOUS AND PARASITIC DISEASES.

1. Typhoid fever.*
2. Paratyphoid fever.*
3. Typhus fever.*
4. Relapsing fever.²
5. Undulant fever.
6. Smallpox.*
7. Measles.*
8. Scarlet fever.*
9. Whooping cough.*
10. Diphtheria.*
11. Influenza.
 - (a) With respiratory complications specified.
 - (b) Without respiratory complications specified.
12. Cholera.

I. INFECTIOUS AND PARASITIC DISEASES.

—Cont.

13. Dysentery.³
 - (a) Amebic.
 - (b) Bacillary.
 - (c) Unspecified or due to other causes.
14. Plague.*
 - (a) Bubonic.
 - (b) Pneumonic.
 - (c) Septicemic.
 - (d) Unspecified.
15. Erysipelas.*
16. Acute poliomyelitis and acute polioencephalitis.*
17. Lethargic or epidemic encephalitis.
18. Epidemic cerebrospinal meningitis.
19. Glanders.⁴

¹ The second decennial revision of the International Classification of Causes of Death was made at Paris, July 1 to 3, 1909. The next revision was also made at Paris, Oct. 11 to 14, 1920, and was used beginning with 1921. The causes of death as given in the third revision number 205, compared with 179 in the first, and 189 in the second classification. The fourth revision of the International List of Causes of Death is largely a revision of the previous edition and is based upon the translation of the official French version of the proceedings of the International Commission of 1929.

² This statement is a reliable one, without autopsy, only when the statement of the cause of death is accompanied or supported by a record of the finding of the etiological factor, that is, the *Spirillum* (*Spirillum* *obermeieri*, before death.

³ Not a reliable statement of cause of death unless the specific cause of infection has been identified.

⁴ Not a reliable statement of cause of death, without autopsy, unless there is an accompanying record of the finding of the etiological factor; i.e., the *bacillus mallei*.

DETAILED INTERNATIONAL LIST — *Continued.*

I. INFECTIOUS AND PARASITIC DISEASES.

—*Cont.*

20. Anthrax (*bacillus anthracis*) malignant pustule.¹
21. Rabies.²
22. Tetanus.³
23. Tuberculosis of the respiratory system.*
24. Tuberculosis of the meninges and central nervous system.⁴
25. Tuberculosis of the intestines and peritoneum.⁵
26. Tuberculosis of the vertebral column.*
27. Tuberculosis of the bones and joints (vertebral column excepted).⁶
 - (a) Tuberculosis of the bones.
 - (b) Tuberculosis of the joints.
28. Tuberculosis of the skin and subcutaneous cellular tissues.⁶
29. Tuberculosis of the lymphatic system (bronchial, mesenteric, and retroperitoneal glands excepted).⁶
30. Tuberculosis of the genitourinary system.⁶
31. Tuberculosis of the other organs.⁶
32. Disseminated tuberculosis.*
 - (a) Acute.
 - (b) Chronic.
 - (c) Unspecified.
33. Leprosy.*
34. Syphilis.⁷
35. Gonococcus infection and other venereal diseases.⁸
36. Purulent infection, septicemia (nonpuerperal).
37. Yellow fever.*
38. Malaria.⁹
39. Other diseases due to protozoal parasites.
40. Ankylostomiasis.¹⁰
41. Hydatid cysts.
 - (a) Of the liver.
 - (b) Of other organs.
42. Other diseases caused by helminths.¹¹
43. Mycoses.¹²
44. Other infectious and parasitic diseases.
 - (a) Chicken-pox.
 - (b) German measles.
 - (c) Others under this title.

II. CANCERS AND OTHER TUMORS.

45. Cancer and other malignant tumors of the buccal cavity and pharynx.*
 - (a) Cancer of the lip.
 - (b) Cancer of the tongue.
 - (c) Cancer of the mouth.
 - (d) Cancer of the jaw.
 - (e) Cancer of other and unspecified parts of the buccal cavity.
 - (f) Cancer of the pharynx.

II. CANCERS AND OTHER TUMORS.—*Cont.*

46. Cancer of the digestive tract and peritoneum.¹³
 - (a) Cancer of the esophagus.
 - (b) Cancer of the stomach and duodenum.
 - (c) Cancer of the intestines (except duodenum, rectum and anus).
 - (d) Cancer of the rectum and anus.
 - (e) Cancer of the liver and biliary passages.
 - (f) Cancer of the pancreas.
 - (g) Cancer of the mesentery and peritoneum.
 - (h) Cancer of others under this title.
47. Cancer of the respiratory system.¹³
 - (a) Cancer of the larynx.
 - (b) Cancer of the lungs and pleura.
 - (c) Cancer of other respiratory organs.
48. Cancer of the uterus.¹³
49. Cancer of other female genital organs.¹³
 - (a) Cancer of the ovary and Fallopian tube.
 - (b) Cancer of the vagina and vulva.
 - (c) Cancer of other female genital organs.
50. Cancer of the breast.*
51. Cancer of the male genitourinary organs.¹³
 - (a) Cancer of the kidneys and suprarenals (male).
 - (b) Cancer of the bladder (male).
 - (c) Cancer of the prostate.
 - (d) Cancer of the testes.
 - (e) Cancer of the scrotum.
 - (f) Cancer of other male genitourinary organs.
52. Cancer of the skin.*
53. Cancer of other or unspecified organs.¹³
 - (a) Cancer of the kidneys and suprarenals (female).
 - (b) Cancer of the bladder (female).
 - (c) Cancer of the brain.
 - (d) Cancer of the bones (except jaw).
 - (e) Cancer of other or unspecified organs.
54. Nonmalignant tumors.*¹³
 - (a) Tumors of the ovary.
 - (b) Tumors of the uterus.
 - (c) Tumors of other female genital organs.
 - (d) Tumors of the brain.
 - (e) Tumors of other organs.
55. Tumors of which the nature is not specified.*¹³
 - (a) Tumors of the ovary (nature unspecified).
 - (b) Tumors of the uterus (nature unspecified).
 - (c) Tumors of other female genital organs (nature unspecified).
 - (d) Tumors of the brain (nature unspecified).
 - (e) Tumors of other organs (nature unspecified).

¹ Not a reliable statement of cause of death, without autopsy, or without determination of the etiological factor; i.e., the *bacillus anthracis*.

² Not a reliable statement of cause of death unless verified by autopsy, or proof that the infecting bite was by a proved rabid animal.

³ A reliable statement of cause of death, without autopsy, when it is accompanied by information as to date, site, nature, and means of injury.

⁴ A reliable statement of cause of death, without autopsy, for children under 10 years of age, but not for decedents of older groups, unless there is confirmatory bacteriological proof of the presence of the tubercle bacillus in the spinal fluid.

⁵ An unreliable statement of cause of death, without autopsy, unless proof of an abdominal operation or recovery of tubercle bacillus from the abdominal fluid is presented.

⁶ Statements of cause of death which relate to organs or parts of the body which are accessible to direct vision are reliable without autopsy.

⁷ Not reliable as a statement of cause of death, without autopsy, unless diagnosis was based on lesions superficially situated or visible through body orifices, or confirmed by unquestioned specific test. A statement of the site, extent, and character of the lesion should be given.

⁸ An unreliable statement of cause of death, without autopsy, unless a gonococcal lesion has been demonstrated by the recovery of the gonococcus from the site of the lesion, or by a specific serum reaction, and unless the lesion was an adequate cause of death.

⁹ Not a reliable statement of cause of death without the supporting statement that the etiological factor, the *Plasmodium malariae*, was found in the blood before death or at autopsy.

¹⁰ A reliable statement of cause of death, without autopsy, provided the infectious parasite *ankylostoma duodenale* or its ova have been demonstrated.

¹¹ A reliable statement of cause of death, without autopsy, only with the demonstration of the parasite or its ova in the tissues or discharges.

¹² A reliable statement of cause of death, without autopsy, only when lesion is accessible to direct examination, or the etiological factor has been identified in the discharges before death.

¹³ An unreliable statement of cause of death, without autopsy, unless an operation was performed or the neoplasm was otherwise visible or accessible for direct observation.

DETAILED INTERNATIONAL LIST — *Continued.*

III. RHEUMATIC DISEASES, NUTRITIONAL DISEASES, DISEASES OF THE ENDOCRINE GLANDS AND OTHER GENERAL DISEASES.

56. Acute rheumatic fever.*
57. Chronic rheumatism, osteoarthritis.
58. Gout.
59. Diabetes mellitus.*
60. Scurvy.*
61. Beriberi.*
62. Pellagra.*
63. Rickets.*
64. Osteomalacia.
65. Diseases of the pituitary body.
66. Diseases of the thyroid and parathyroid glands.
 - (a) Simple goiter.
 - (b) Exophthalmic goiter.
 - (c) Myxedema and cretinism.
 - (d) Tetany.
 - (e) Other diseases of the thyroid and parathyroid glands.
67. Diseases of the thymus gland.
68. Diseases of the adrenals (Addison's disease not specified as tuberculous).*
69. Other general diseases.

IV. DISEASES OF THE BLOOD AND BLOOD-MAKING ORGANS.

70. Hemorrhagic conditions.
 - (a) Primary purpuras.
 - (b) Hemophilia.
71. Anemias.¹
 - (a) Pernicious anemia.
 - (b) Other anemias.
72. Leukemias and pseudoleukemias.²
 - (a) True leukemias.
 - (b) Pseudoleukemias (Hodgkin's disease).
73. Diseases of the spleen.
74. Other diseases of the blood and blood-making organs.

V. CHRONIC POISONINGS AND INTOXICATIONS.

75. Alcoholism (acute or chronic).*
76. Chronic poisoning by other organic substances.³
 - (a) Occupational.
 - (b) Other chronic poisoning by organic substances.
77. Chronic poisoning by mineral substances.
 - (a) Lead.⁴
 - (b) Occupational (except lead).⁵
 - (c) Other chronic poisoning by mineral substances.⁵

VI. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.

78. Encephalitis (nonepidemic).
79. Meningitis.
 - (a) Simple meningitis.
 - (b) Nonepidemic cerebrospinal meningitis.
80. Progressive locomotor ataxia (tabes dorsalis).*
81. Other diseases of the spinal cord.

VI. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.—*Cont.*

82. Cerebral hemorrhage, cerebral embolism and thrombosis.
 - (a) Cerebral hemorrhage.
 - (b) Cerebral embolism and thrombosis.
 - (c) Softening of the brain.
 - (d) Hemiplegia and other paralysis, cause unspecified.
83. General paralysis of the insane.*
84. Dementia praecox and other psychoses.
85. Epilepsy.⁶
86. Convulsions (under 5 years of age).
87. Other diseases of the nervous system.*
 - (a) Neuralgia and neuritis.
 - (b) Other diseases of the nervous system.
88. Diseases of the organs of vision.*
89. Diseases of the ear and mastoid process.*
 - (a) Diseases of the ear.
 - (b) Diseases of the mastoid process.

VII. DISEASES OF THE CIRCULATORY SYSTEM.

90. Pericarditis.⁷
91. Acute endocarditis.*
 - (a) Specified as acute.
 - (b) Unspecified (under 45 years of age).
92. Chronic endocarditis, valvular diseases.*
 - (a) Endocarditis, specified as chronic, and other valvular diseases.
 - (b) Endocarditis, unspecified (45 years and over).
93. Diseases of the myocardium.*
 - (a) Acute myocarditis.
 - (b) Myocarditis, unspecified (under 45 years).
 - (c) Chronic myocarditis and myocardial degeneration.
 - (d) Unspecified.
94. Diseases of the coronary arteries and angina pectoris.*
 - (a) Angina pectoris.
 - (b) Diseases of the coronary arteries.
95. Other diseases of the heart.*
 - (a) Functional diseases of the heart.
 - (b) Other and unspecified.
96. Aneurysm (except of the heart).
97. Arteriosclerosis (diseases of the coronary arteries excepted).
98. Gangrene.
99. Other diseases of the arteries.*
100. Diseases of the veins (varices, hemorrhoids, phlebitis, etc.).⁸
101. Diseases of the lymphatic system (lymphangitis, etc.).*
102. Idiopathic anomalies of the blood-pressure.
103. Other diseases of the circulatory system.*

VIII. DISEASES OF THE RESPIRATORY SYSTEM.

104. Diseases of the nasal fossæ and annexæ.*
105. Diseases of the larynx.*
106. Bronchitis.
 - (a) Acute.
 - (b) Chronic.*
 - (c) Unspecified (under 5 years of age).
 - (d) Unspecified (5 years and over).

¹ An unreliable statement of cause of death, without autopsy, unless an operation was performed.

² Not a reliable statement of cause of death unless verified by confirmatory blood examination.

³ A reliable statement of cause of death, without autopsy, *only* when the source of the poison is specified, or when there is chemical or microscopic proof of the presence of the poison within the body.

⁴ A reliable statement of cause of death, without autopsy, *if* there appears a statement of an occupation in which decedent would be subject to lead poisoning, or if the source of the poisoning is specified and complications accompanying, sufficient to cause death, are described.

⁵ A reliable statement of cause of death, without autopsy, *only* in cases where the occupation or source of poison is specified and it is indicated that the poison was absorbed as a result of occupation; or the characteristic lesions are superficially located or accessible to direct inspection; or there is chemical or microscopic proof of the presence of poison within the body.

⁶ An unreliable statement of cause of death, without autopsy, unless death occurred in an epileptic attack and was witnessed, and there was a previous history of epilepsy.

⁷ An unreliable statement of cause of death, without autopsy, unless accompanied by a statement of primary cause or of the character of exudate obtained by paracentesis.

⁸ A reliable statement of cause of death, without autopsy, *if* there is an accompanying statement of the site of the lesion or name of the vessel or vessels involved.

DETAILED INTERNATIONAL LIST — *Continued.*VIII. DISEASES OF THE RESPIRATORY SYSTEM —
Cont.

- 107. Bronchopneumonia (including capillary bronchitis).^{*}
 - (a) Bronchopneumonia.
 - (b) Capillary bronchitis.
- 108. Lobar Pneumonia.
- 109. Pneumonia, unspecified.
- 110. Pleurisy.^{*}
- 111. Congestion, edema, embolism, hemorrhagic infarct, and thrombosis of the lung.¹
 - (a) Pulmonary embolism and thrombosis.
 - (b) Others under this title.
- 112. Asthma.
- 113. Pulmonary emphysema.^{*}
- 114. Other diseases of the respiratory system (tuberculosis excepted).^{*}
 - (a) Chronic interstitial pneumonia, including occupational diseases of the respiratory system.
 - (b) Others, including gangrene of the lung.

IX. DISEASES OF THE DIGESTIVE SYSTEM.

- 115. Diseases of the buccal cavity and annexa and of the pharynx and tonsils (including adenoid vegetations).^{*}
 - (a) Diseases of the pharynx and tonsils.
 - (b) Others under this title.
- 116. Diseases of the esophagus.^{*}
- 117. Ulcer of the stomach and duodenum.
 - (a) Ulcer of the stomach.
 - (b) Ulcer of the duodenum.
- 118. Other diseases of the stomach (cancer excepted).
- 119. Diarrhea and enteritis (under 2 years of age).^{*}
- 120. Diarrhea and enteritis (2 years and over).
- 121. Appendicitis.
- 122. Hernia, intestinal obstruction.
 - (a) Hernia.²
 - (b) Intestinal obstruction.³
- 123. Other diseases of the intestines.
- 124. Cirrhosis of the liver.^{*}
 - (a) Specified as alcoholic.
 - (b) Not specified as alcoholic.
- 125. Other diseases of the liver (including yellow atrophy of liver).^{*}
 - (a) Yellow atrophy of liver.
 - (b) Others under this title.
- 126. Biliary calculi.^{*}
- 127. Other diseases of the gall-bladder and biliary passages.
- 128. Diseases of the pancreas.
- 129. Peritonitis, cause not specified.

X. DISEASES OF THE GENITOURINARY SYSTEM.

- 130. Acute nephritis (including unspecified under 10 years of age).
- 131. Chronic nephritis.^{*}
- 132. Nephritis, unspecified (10 years and over).^{*}
- 133. Other diseases of the kidneys and ureters (puerperal diseases excepted).
- 134. Calculi of the urinary passages.^{*}
- 135. Diseases of the bladder (tumors excepted).^{*}
- 136. Diseases of the urethra, urinary abscess, etc.^{*}
 - (a) Stricture of the urethra.
 - (b) Others under this title.
- 137. Diseases of the prostate.^{*}
- 138. Diseases of the male genital organs, not specified as venereal.^{*}

X. DISEASES OF THE GENITOURINARY SYSTEM —
Cont.

- 139. Diseases of the female genital organs, not specified as venereal.^{*}
 - (a) Cysts of the ovary.
 - (b) Other diseases of the ovaries and diseases of the tubes and parametrium.
 - (c) Diseases of the uterus.
 - (d) Nonpuerperal diseases of the breast (cancer excepted).
 - (e) Other diseases of the female genital organs.

XI. DISEASES OF PREGNANCY, CHILDBIRTH AND THE PUERPERAL STATE.

- 140. Abortion with septic conditions.^{*}
- 141. Abortion without mention of septic conditions (to include hemorrhages).^{*}
- 142. Ectopic gestation.^{*}
 - (a) Septic conditions specified.
 - (b) Septic conditions not mentioned.
- 143. Other accidents of pregnancy (not to include hemorrhages).^{*}
- 144. Puerperal hemorrhage.^{*}
 - (a) Placenta praevia.
 - (b) Other puerperal hemorrhages.
- 145. Puerperal septicemia (not specified as due to abortion).^{*}
 - (a) Puerperal septicemia and pyemia.
 - (b) Puerperal tetanus.
- 146. Puerperal albuminuria and eclampsia.^{*}
- 147. Other toxemias of pregnancy.^{*}
- 148. Puerperal phlegmasia alba dolens, embolus, sudden death (not specified as septic).^{*}
- 149. Other accidents of childbirth.^{*}
 - (a) Cesarean operation.
 - (b) Others under this title.
- 150. Other and unspecified conditions of the puerperal state.^{*}

XII. DISEASES OF THE SKIN AND CELLULAR TISSUE.

- 151. Furuncle, carbuncle.⁴
- 152. Phlegmon, acute abscess.⁴
- 153. Other diseases of the skin and annexa, and of the cellular tissue.^{*}

XIII. DISEASES OF THE BONES AND ORGANS OF LOCOMOTION.

- 154. Osteomyelitis.^{*}
- 155. Other diseases of the bones (tuberculosis excepted).^{*}
- 156. Diseases of the joints and other organs of locomotion.^{*}
 - (a) Diseases of the joints (tuberculosis and rheumatism excepted).
 - (b) Diseases of other organs of locomotion.

XIV. CONGENITAL MALFORMATIONS.

- 157. Congenital malformations.^{*}
 - (a) Congenital hydrocephalus.
 - (b) Spina bifida and meningocele.
 - (c) Congenital malformations of the heart.
 - (d) Other congenital malformations.

¹ Pulmonary congestion is considered a reliable statement of cause of death, without autopsy, only when the cause is specified; as, for example, *accidental inhalation of irritating fumes*, or accompanying lesions which are known to lead to congestion of the lungs.

² A reliable statement of cause of death if the hernia is external, or is exposed on operation or autopsy, when internal; also, when conditions adequate to cause of death, together with type and location of hernia, are specified.

³ An unreliable statement of cause of death unless the obstruction is demonstrated on autopsy or operation, or is accessible by examination through the body orifices.

⁴ A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site and nature of the original infection.

DETAILED INTERNATIONAL LIST — *Continued.*

XV. DISEASES OF EARLY INFANCY.

- 158. Congenital debility.
- 159. Premature birth.*
- 160. Injury at birth.*
 - (a) Cesarean operation.
 - (b) Without Cesarean operation.
- 161. Other diseases peculiar to early infancy.
 - (a) Atelectasis.
 - (b) Icterus of the new-born.
 - (c) Sclerema.
 - (d) Others under this title.

XVI. SENILITY.

- 162. Senility.

XVII. VIOLENT AND ACCIDENTAL DEATHS.

- 163. Suicide by solid or liquid poisons or by absorption of corrosive substances.¹
 - (a) Arsenical group.
 - (b) Barbituric acid and all derivatives.
 - (c) Cresol compounds group.
 - (d) Mercury compounds.
 - (e) Nux vomica and strychnine.
 - (f) Lye group.
 - (g) Tobacco and derivatives.
 - (h) Narcotic group.
 - (m) Hydrocyanic acid and all cyanides except gases.
 - (o) Carbolic acid and phenol.
 - (r) All other poisons or kinds not stated.
- 164. Suicide by poisonous gas.²
- 165. Suicide by hanging or strangulation.*
- 166. Suicide by drowning.*
- 167. Suicide by firearms.*
- 168. Suicide by cutting or piercing instruments.*
- 169. Suicide by jumping from high places.*
- 170. Suicide by crushing.*
- 171. Suicide by other means.*
- 172. Homicide (Infanticide, murder of infants less than one year of age).*
- 173. Homicide by firearms.*
- 174. Homicide by cutting or piercing instruments.*
- 175. Homicide by other means.*
- 176. Attack by venomous animals.*
- 177. Poisoning by food.*
- 178. Accidental absorption of poisonous gas.
- 179. Other acute accidental poisonings (gas excepted).
 - (a) Arsenical group.
 - (b) Barbituric acid and all derivatives.
 - (c) Cresol compounds group.
 - (d) Mercury compounds.
 - (e) Nux vomica and strychnine.
 - (f) Lye group.
 - (g) Tobacco and derivatives.
 - (h) Narcotic group.
 - (m) Menthanol, denatured, wood and other alcohols (not ethyl).
 - (o) Carbolic acid and phenol.
 - (r) All other poisons or kinds not stated.
- 180. Conflagration.*
- 181. Accidental burns (conflagration excepted).*
- 182. Accidental mechanical suffocation.*
- 183. Accidental drowning.*
- 184. Accidental traumatism by firearms (wounds of war excepted).
- 185. Accidental traumatism by cutting or piercing instruments (wounds of war excepted).⁴
- 186. Accidental traumatism by fall, crushing, landslide.*
 - (a) Fall.
 - (b) Crushing, landslide.
- 187. Cataclysm.
- 188. Injuries by animals.*
- 189. Hunger and thirst.*
- 190. Excessive cold.*
- 191. Excessive heat.*
- 192. Lightning.*
- 193. Accidents due to electric currents.
- 194. Other accidents.
 - (a) Foreign bodies.
 - (b) Others under this title.

- 195. Violent deaths of unknown nature.
- 196. Wounds of war.
- 197. Execution of civilians by belligerent armies.
- 198. Legal executions.*
- XVIII. ILL-DEFINED CAUSES OF DEATH.
- 199. Sudden death.
- 200. Cause of death not specified or ill-defined.
 - (a) Ill-defined.
 - (b) Not specified or unknown.

SUPPLEMENT FOR VIOLENT AND ACCIDENTAL DEATHS.

- 201. Accidents in mines and quarries.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 202. Accidents from agricultural machinery.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 203. Elevator accidents.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 204. Accidents from machinery used for recreation.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 205. Other machinery accidents.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.

¹ A reliable statement of cause of death, without autopsy, if the character of the solid or liquid is specified.

² A reliable statement of cause of death, without autopsy, if the character of the gas is specified.

³ An unreliable statement of cause of death without supporting data as to a group of accompanying cases or the ingestion of the particular poisonous substances.

⁴ An unreliable statement of cause of death without supporting data, such as site and extent of injury.

DETAILED INTERNATIONAL LIST — *Continued.*SUPPLEMENT FOR VIOLENT AND ACCIDENTAL DEATHS—*Cont.*

206. Railroad and automobile collisions.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
207. Other railroad accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
208. Street car and automobile collisions.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
209. Other street car accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
210. Automobile accidents (primary).*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.

SUPPLEMENT FOR VIOLENT AND ACCIDENTAL DEATHS—*Cont.*

211. Motorcycle accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
212. Other land transportation accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
213. Water transportation accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.
214. Air transportation accidents.*
 (a) Accidental absorption of poisonous gas.
 (b) Accidental burns (conflagration excepted).
 (c) Accidental mechanical suffocation.
 (d) Accidental drowning.
 (e) Accidental traumatism by cutting or piercing instruments.
 (f) Accidental traumatism by fall.
 (g) Accidental traumatism by crushing, landslide.
 (h) Accidents due to electric currents.
 (k) Foreign bodies.
 (m) Other accidents.

2. ABRIDGED INTERNATIONAL LIST.

The following table shows each title of the Abridged International List. The numbers of the titles of the Detailed International List included in each title of the abridged list appear in parentheses.

Abridged
Int. List
Number.

CAUSE OF DEATH.

1. Typhoid and paratyphoid fever (1, 2).*
2. Typhus fever (3).*
3. Smallpox (6).*
4. Measles (7).*
5. Scarlet fever (8).*
6. Whooping cough (9).*
7. Diphtheria (10).*
8. Influenza (11).
9. Plague (14).*
10. Tuberculosis of the respiratory system (23).*
11. Other forms of tuberculosis (24, 25, 26, 27, 28, 29, 30, 31, 32).
12. Syphilis (34).
13. Malaria (38).
14. Other infectious and parasitic diseases (4, 5, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 33, 35, 36, 37, 39, 40, 41, 42, 43, 44).
15. Cancer and other malignant tumors (45, 46, 47, 48, 49, 50, 51, 52, 53).
16. Tumors, nonmalignant, or of which the nature is not specified (54, 55).*
17. Chronic rheumatism and gout (57, 58).
18. Diabetes mellitus (59).
19. Alcoholism (acute or chronic) (75).
20. Other general diseases and chronic poisonings (56, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 76, 77).
21. Progressive locomotor ataxia and general paralysis of the insane (80, 83).
22. Cerebral hemorrhage, cerebral embolism and thrombosis (82).
23. Other diseases of the nervous system and of the organs of special sense (78, 79, 81, 84, 85, 86, 87, 88, 89).
24. Diseases of the heart (90, 91, 92, 93, 94, 95).*
25. Other diseases of the circulatory system (96, 97, 98, 99, 100, 101, 102, 103).
26. Bronchitis (106).
27. Pneumonias (107, 108, 109).
28. Other diseases of the respiratory system (tuberculosis excepted) (104, 105, 110, 111, 112, 113, 114).
29. Diarrhea and enteritis (119, 120).
30. Appendicitis (121).
31. Diseases of the liver and biliary passages (124, 125, 126, 127).
32. Other diseases of the digestive system (115, 116, 117, 118, 122, 123, 128, 129).
33. Nephritis (130, 131, 132).
34. Other diseases of the genitourinary system (133, 134, 135, 136, 137, 138, 139).
35. Puerperal septicemia (140, 145).*
36. Other diseases of pregnancy, childbirth and the puerperal state (141, 142, 143, 144, 146, 147, 148, 149, 150).*
37. Diseases of the skin and cellular tissue, and of the bones and organs of locomotion (151, 152, 153, 154, 155, 156).
38. Congenital debility and malformations, premature birth and other diseases of early infancy (157, 158, 159, 160, 161).
39. Senility (162).
40. Suicide (163, 164, 165, 166, 167, 168, 169, 170, 171).*
41. Homicide (172, 173, 174, 175).
42. Violent and accidental deaths (suicide and homicide excepted) (176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198).
43. Cause of death not specified or ill-defined (199, 200).
